

BANK Performance

This game will be played over either 9 holes or 18 holes. For the purpose of this example we will use 9 holes. Then you must select a footage to start with, this will be your “Deposit”. To keep things simple let's use 50ft as our deposit.

From there we will select 9 different holes or places to play from. After each shot we must measure the proximity to the hole and take that number from our deposit. For example if our first shot is 9ft, then we have 41ft remaining for the final 8 holes.

If you chip in, you get to add 10ft to your deposit!

The goal is to finish the game without going bust. When you complete the game successfully, note your PB score, and use this as your starting score the next time you do this drill.
